

Wow...you guys are the best. The helpful spirit of Amateur Radio lives on. It's nice to know that in this competitive age, the members of the Midland ARC would be willing to help their primary rivals and the Big Bend ARC thanks you.

We didn't get to test all the properties of MARC's secret "GO FAST GENERATOR JUICE" but we were able to try a few. We sprinkled a few drops on each of our cooks. Our great food was even greater than in past Field Days and they weren't near as cranky as they have been.

We put a drop or two on the final of all four FT9000s and they acted like they were putting their "150 watts" output into a bunch of monobanders including 80 meters.

We divided the remainder between our gasoline powered generators and man-oh-man was that a good move. We lost an hour while we shunted the 180 volts output back to 120 but it was worth it. They ran all weekend without refueling.

Thanks to you guys we ran up the highest score we've had in years. We do have one favor to ask...next year would you please send us a gallon of the stuff. We want to see what it does when we feed it to the SSB operators.

73 and wait'll next year.

The Big Bend ARC Field Day Folks

**Congratulations on your Great Score.**
